

ABSTRACT OF THE DISCLOSURE

A peep light support apparatus and method providing a telescoping staff assembly including an upper staff member, a steering light mounted near the top of the upper staff, and a clamp device capable of mounting a base portion of the staff assembly to a barge. Some embodiments include a bow amber light supported on the staff assembly. Some embodiment include lashing ties on the staff assembly. Another embodiment includes a watertight electrical system for providing power to the steering light. An exemplary method includes supporting a steering light on a barge bow using a staff assembly including an upper staff member that supports the steering light, and provides clamping and lashing down the staff assembly to the barge. A portable shield system including a navigation light wherein the shield includes an aluminum base, back, and side walls, and a fastener to fasten the assembly to a barge.
